

Typical Reinforced GeoStone Retaining Wall

General Notes

GeoStone Retaining Walls use the patented Open Core technology in combination with "Rock Interlock" to achieve its connection strength. This open core allows for complete freedom of installation without being hindered by lips, pins, or other such connection methods necessary for other systems. We encourage you to compare our test results with those of other systems and you will find that GeoStone and its open core technology are hands down, one of the best systems to ever come into the Segmental Retaining Wall Market.

Wall Design: GeoStone - dja  
 Installer: Complete Scapes  
 GC: GSC Construction
